

TECO @ THE HOT END

Park Cam, Bozüyük, Turkey.

A brand new container glass plant.
One of the world's largest end-fired
container glass furnaces.

Supplied by **TECOGLAS**

ONE GROUP - FIVE COMPANIES

As part of the TECO Group, Toledo Engineering, Tecoglas and KTG Systems can offer complete capabilities in glass furnaces of all types, with KTG Engineering supporting this activity as glass plant equipment manufacturers. Zedtec are the TECO Group specialists in forehearth and working end technology. The TECO Group has been serving the world's primary glass manufacturing industry since 1927.

Does your contractor add value?

When you invest financially in a new furnace build, you invest a great deal of trust in your glass plant contractor. You should feel they give you the winning edge. It should feel like you have an extra player on your team. Does your contractor add value?

We match the right expertise from across our group, be that technology or people, with the right client projects. We call this "added value contracting" because when you invest in us, we invest more than technology in you.

In our 80 plus year history, the TECO Group has designed and built over 1,000 glass melting furnaces. We can do it all, whatever your furnace type and our technology is innovative, efficient and you can trust us to deliver.

But we invest more than technology in your business.

The very least you should expect from any contractor is to design and build a glass production facility that incorporates the optimal mix of new technology and proven equipment and materials. But, a good investment should reward your organisation with more.

At TECO Group it's our people; our experts, who underpin our lasting success and offer the added value. We recognise that as the glass industry, as with all industry, has become increasingly profit conscious, it has been impossible for

some organisations to maintain the level of in-house expertise they once had.

What we promise our clients is that TECO engineers and project managers will always go that extra mile and help our clients stay abreast of new ideas and thinking. We are always on hand to answer any questions and concerns that our clients might have regarding their furnace rebuild or new plant project.

We work hard to cultivate strong, lasting business relationships with each and every one of our clients and understand that close collaboration throughout projects is paramount to the team effort and success.

When you're working with TECO, we encourage the free, unhindered flow of data, information and advice throughout the life of your furnace.

Quite simply, if our clients are happy throughout the life of their furnace, then so are we.

feature:

Made in Sheffield

KTG Engineering is delighted to have been awarded the “Made in Sheffield” quality stamp of approval for its innovative and world renowned electrode holder.

Born and bred in Sheffield, England, KTG Engineering has a track record and reputation synonymous with quality. As part of the TECO Group, KTG is a specialist manufacturer of glass furnace equipment and supplies many different products, including its specialist electrode holder.

The SX Electrode holder is unique to KTG. Used in boost systems, it is unique because of its’ one-piece design. It is manufactured from solid high temperature resistant alloy whereas traditional electrode holders have joints and subsequent weak spots.

This product is exceptional. It can be used in both vertical and horizontal installations and has a superb cooling aspect. With a service record in all types of glass production that is second to none, all holders have full traceability and every one of our holders is subject to rigorous inspection and testing.

The SX Electrode holder demonstrates that KTG Engineering leads the way when it comes to quality craftsmanship and manufacturing techniques and so does Sheffield.

There are very few cities with trademarks that are recognised worldwide but Sheffield does.

Sheffield is a city with great heritage and a global reputation for excellence. Known worldwide for its world-class manufacturing, Made in Sheffield is a symbol of quality and marks a product’s origin.

Ian Westwood, Managing Director at KTG Engineering says of the achievement, “KTG has an ongoing commitment to quality and excellence. We are delighted to have achieved the Made in Sheffield stamp of approval. Quality is at the heart of everything KTG does and it’s marvellous to now be aligned with this prestigious brand that is known across the globe.”

We’ve made a video, so if you would like to see how our electrode holders are “Made in Sheffield”, please get in touch with us at sales@ktgengineering.com
